Coffee Overflow

Problem Statement

01 Digitalization

In the past few years, we have all moved to online learning.

02 Reliance

Most students today rely on electronic gadgets for their learning.

03 Resources and e - classes

Many coaching classes today operate in an online mode. And provide video lectures and e – resources.

04 Time spent

Therefore, students today spend much time online and are dependent on online resources for their learning.

05 Distraction

Due to the excess time spent online, students are often lured by other apps.

06 Ample Distracting Apps

There is no shortage of distractions on the internet with various streaming platforms, social media, etc.

07 Getting Carried Away

And often students lose track of time and spend excessive time on these unproductive sites.

08 Failure to accomplish goals

This causes a huge impact on the academic goals and priorities.

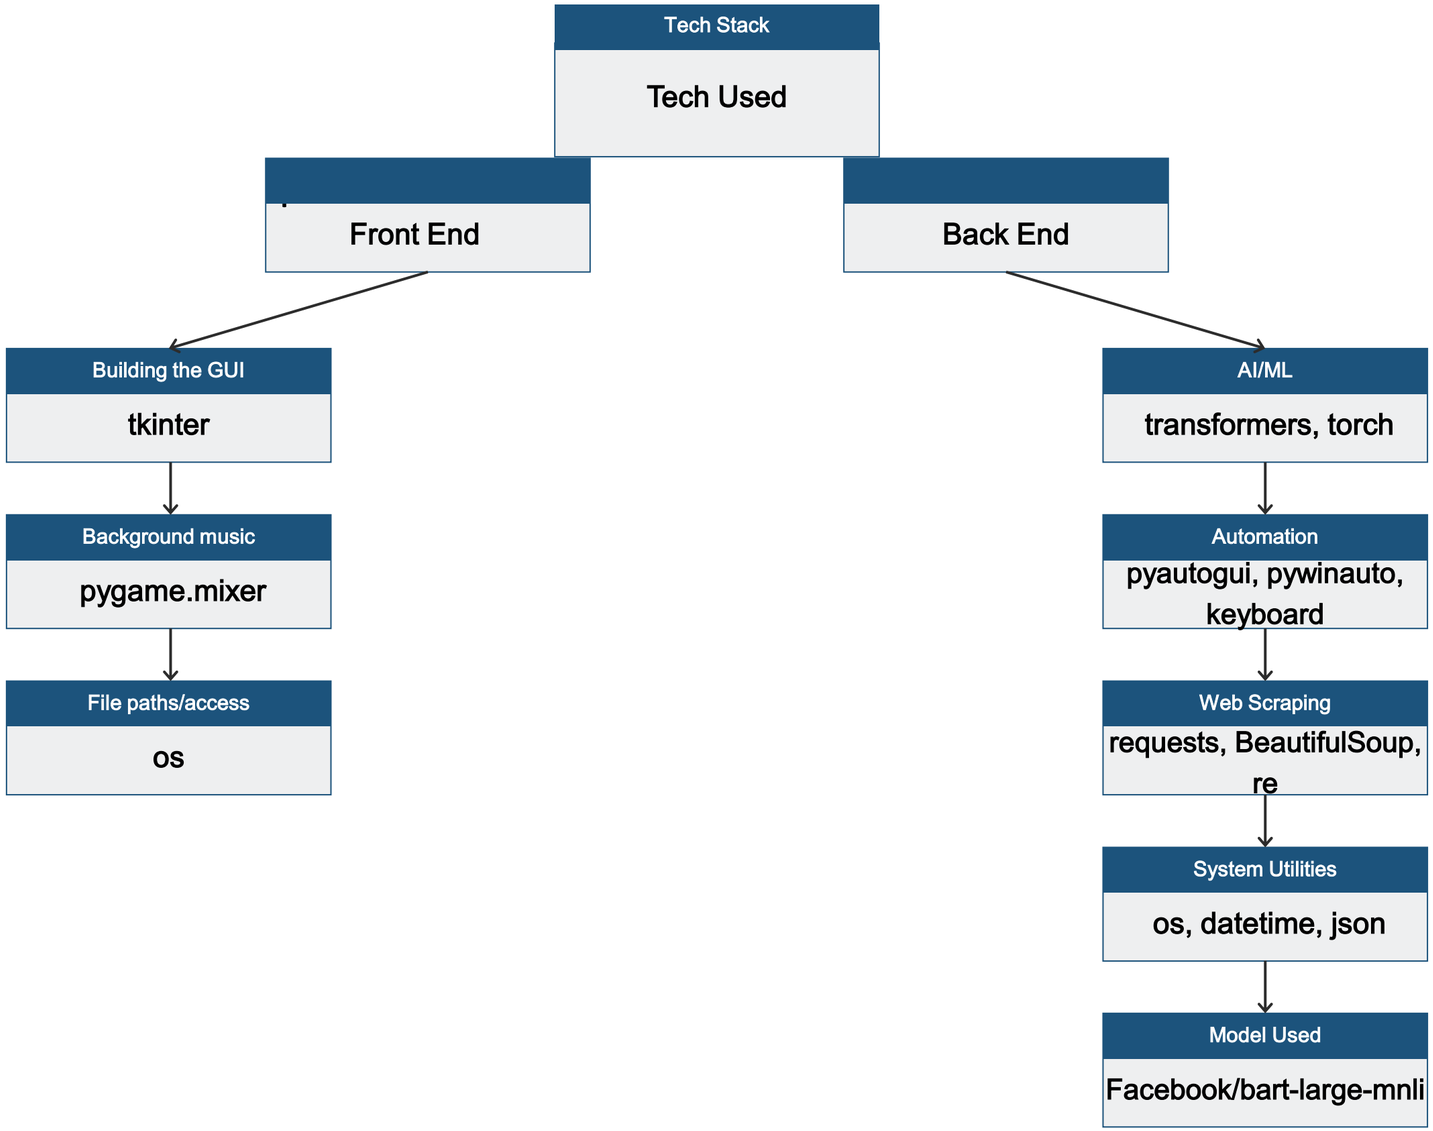

Coffee Overflow

Proposed Solution

Identifying the Distracting Apps	Usually, students fail to recognize the distracting apps that surround them on the internet.	We will use AI to identify the distracting apps by detecting keywords.
Shutting down the distracting site	Students are often unable to resist and bring themselves to shut down the distracting site	To combat this, we will auto shut the site completely
User Intervention	Sometimes, the user needs certain websites for their academics.	Therefore, our app will give a facility to manually permit certain apps to function as and when required
Time Record	The students often don't keep track of time when studying	Our app will allow student to time their studying hours to motivate and account them

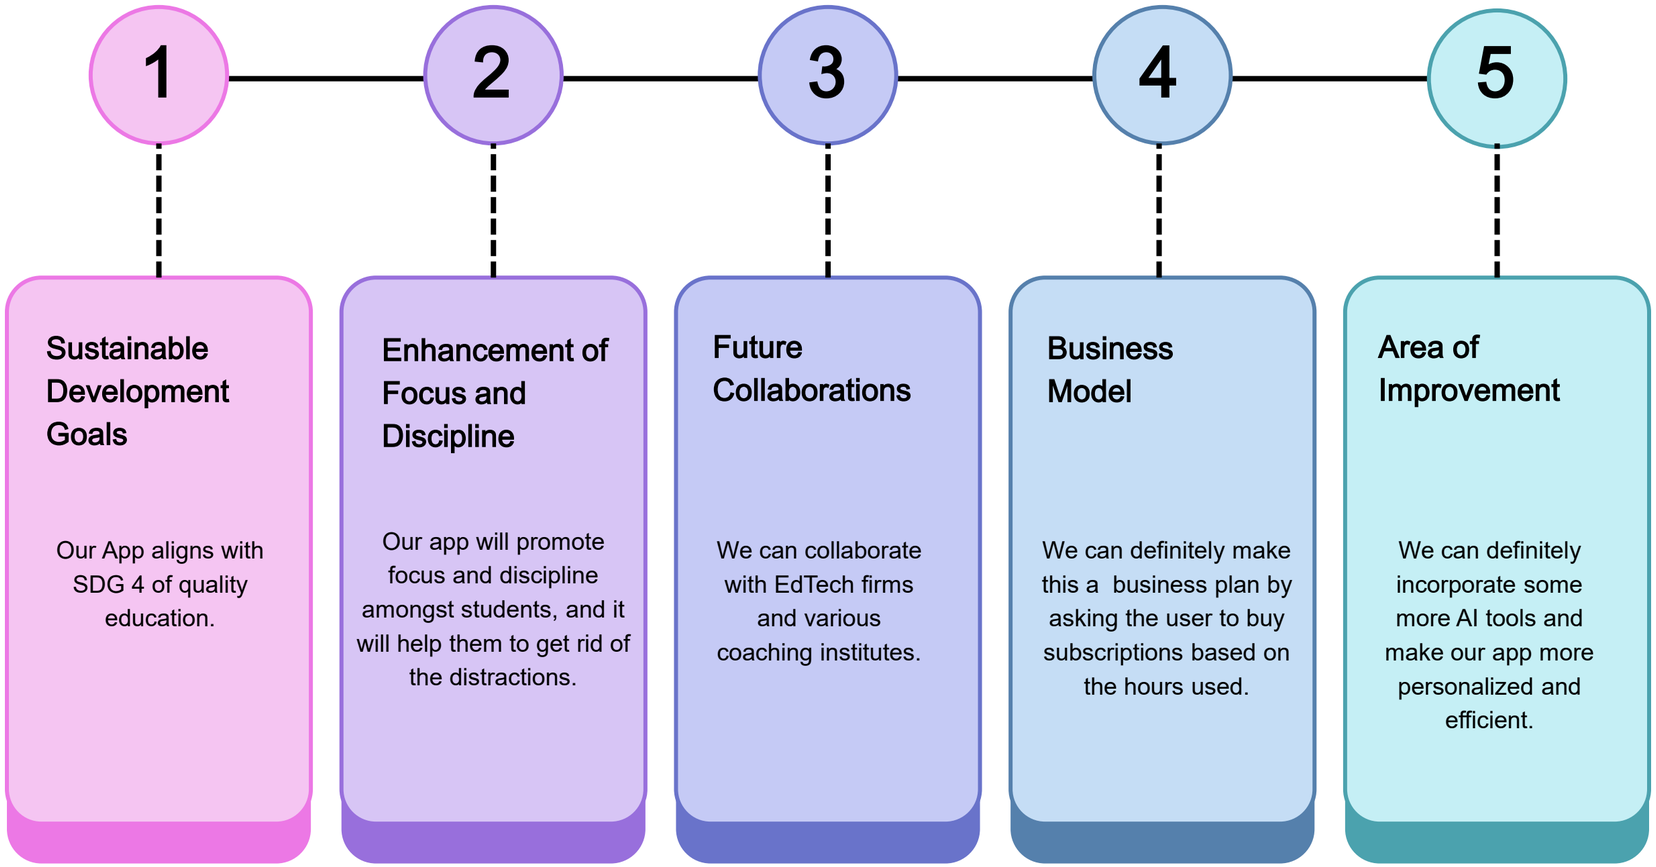

Coffee Overflow

Technical Approach

Coffee Overflow

Conclusion

Coffee Overflow
